

RESEARCH
INTERESTS

- **Gravitational wave:** Signal simulation, post-Newtonian waveform.
- **Detection:** Space- and ground-based detectors, Time-delay interferometry, Noise.
- **Binary system:** Stellar binary black hole, Massive black hole binary, Galactic binary.
- **Data processing:** Parameter estimation, Fisher matrix, Bayesian analysis.
- **Gravitation:** Modified theory of gravity, Cosmology, Dark matter.
- **Astronomy:** Electromagnetic observation, Multi-messenger observation.

Currently, my primary research focus is on the simulation of gravitational wave signals in space, assessment of detector performance, and the processing and analysis of gravitational wave data.

EDUCATIONAL
BACKGROUND**Chongqing University**

Chongqing, China

*Ph.D. in Physics*Sep 2022 - Jun 2028 (*expected*)

- Advisor: Prof. Jin Li
- Research area: Gravitational wave data simulation and detector performance evaluation

China West Normal University

Nanchong, Sichuan, China

B.S. in Physics

Sep 2018 - Jun 2022

- Advisors: Dr. Di Wu and Assoc. Prof. Guo-Ping Li
 - Research area: Ground-based gravitational wave detection and data processing
 - Thesis (in Chinese): An Analysis of the LIGO Gravitational Waves Data Based on Newtonian Approximate Model
-

EXPERIENCE

Beijing Normal University

Beijing, China

VISITOR

Feb 2024 - Apr 2024

- Advisor: Prof. Zhoujian Cao
- Research area: Gravitational wave waveform simulation and moving source effect

University of Chinese Academy of Sciences

Beijing, China

PARTICIPANT

Feb 2020 - Feb 2021

- Advisors: Assoc. Prof. Yong Tang
 - Research area: Dark matter and modified gravity theory
 - Program: College Student Innovation and Practice Program
-

SKILLS

Languages: Chinese (native), English (CET-6).**Programming:** Python, Mathematica, MATLAB.**Data Analysis:** Experienced in handling and analyzing large datasets, including statistical analysis, data visualization, and signal processing.
